

Seq	Category	Task	Who	Mark Comments
A	SRS (via View source)	What happens if I delete a 245 and add a new 245 at the bottom of the record?	Mark	new 245 follows the 999 and remains the last field in the record
C	Inventory instance: Added field shows in the instance	A new 035	Mark	OK (using testing)
C	Inventory instance: Added field shows in the instance	A new non-ff 999 field	Mark	OK. Added 090 and it showed up as LC in Classification.
C	Inventory instance: Added field shows in the instance	A new note	Mark	OK.
D	Inventory instance: A changed field shows properly in the instance	Add something to a 245	Mark	OK
D	Inventory instance: A changed field shows properly in the instance	Fix a typo in a 5xx	Mark	OK. Note that changing order in the MARC record also changes the order in the instance record.
E	Inventory instance: If a field or subfield was removed, it no longer appears in the instance	Delete 245 \$b	Mark	OK.
E	Inventory instance: If a field or subfield was removed, it no longer appears in the instance	Delete a 5xx	Mark	Fail? Deleted 504. It was removed in inventory, but remains in source. This happens even if I go view another inventory record and then come back.
E	Inventory instance: If a field or subfield was removed, it no longer appears in the instance	Delete a 6xx	Mark	Fail? No longer appears in the instance, but still in the source record. There are two subject fields in inventory, but 5 in SRS.
E	Inventory instance: If a field or subfield was removed, it no longer appears in the instance	Delete an 035	Mark	Fail. Same as 504 above. 035 removed in inventory but remains in SRS. After several add/deletes, I have three 035s in inventory, and three in SRS, but they are not the same three.
G	Inventory instance: Subfield change triggers change in reference data	020 change \$a to \$z causes identifier type to change from ISBN to Invalid ISBN	Mark	OK. But record does not change in source.

Mark	I changed the position of the 245 after creating it at the bottom of the record. The field appears above the 264 in quickMARC, but still appears at the end of the record in the source record.
Mark	Inventory and SRS seem to get out of sync after several rounds of edits
