Description

Purpose: Libraries want to assign Departments to users via the UI

Requirements

- Should only display Department field when the user has added a Department in Settings > Users > Department
- Department is a repeatable field.
- Department is not a required field
- Should be able to assign multiple departments
- Should be able to remove all assigned department

As a staff person

I want to be able to enter as many departments as needed in the User record so that I am aware of all the departments assigned to that user.

Scenarios

1. Scenario
Given I am a User create/edit record
When a department has been added to Settings > Users > Department
AND I click on the Department field
THEN I should see the Department field populated with the department name
